## 1 Overview of menu navigation

## 2 Parameter list

Parameter	Code	Text in display, line 1	Meaning	Factory setting	Setting range
Parameter group J0-J5 "Monitoring functions"					
J0	3	J0 Monitor.funct	Monitoring functions	0	0, 1
J1	—	J1 Monitor.pr.no	Monitoring program no.	0	0, 1
J5	—	J5 Ana input moni.	Analogue input monitoring	0	0, 1

Parameter code 3 = 4711

### 3 Parameter description and explanation of function

#### **Parameter block J0-J5 "Monitoring functions"**

##### **Parameter J0 "Monitoring functions"**

Parameter J1 can be faded in or out with parameter J0. Parameter J0 is factory-set to 0. Parameter J1 is not shown in the display.

J0 =	Text in display, line 3	Meaning
0	0 faded out	Parameter J1 is faded out (invisible)
1	1 faded in	Parameter J1 is faded in (visible)

##### **Parameter J1 "Monitoring program no."**

The monitoring program is set with parameter J1. If the parameter value is set to 1, valve current monitoring is primarily active. If no valve current flows during a cleaning pulse (valve defective or cable break) a valve current alarm indicating the filter valve number, the RMV address (address of the I/O module RM-V8 or RM-V16) and the RMV valve number (valve number of the I/O module RM-V8 or RM-V16) is issued.

J1 =	Text in display, line 3	Meaning
0	0 No Function	The monitoring functions are not active
1	1 Valve current	Valve current monitoring The current consumption of the individual valves is monitored by the connected I/O modules RM-V8 or RM-V16.

#### **Parameter J5 "Analogue Input Monitoring"**

J5 =	Text in display, line 3	Explanation 1-6:
0	0 inactive	The monitoring functions are not active.
1	1 IE1 < 1.0 mA	An alarm message is issued if the input current of input 1 drops below 1.0 mA.

## 4 Operating messages on the display

In the operating mode of the filter control RM-350 C the following operating messages are either displayed directly or they can be retrieved in sequence by pressing the  $\Delta$  key or the  $\nabla$  key. Non-active functions are not displayed.

If no key is pressed during a duration of 3 minutes the display automatically returns to operating message 1.

Display	Meaning
Cleaning monitoring	Row 1 If cleaning monitoring is active
Valve current active	Row 3 and valve current monitoring active
